

PELANGI

Fast Water Buoy

PB750FW

Lightweight, highly stable buoy for high current river or estuary applications.

Red PB750FW Buoy with Red Can Top Mark.

- Rotationally Moulded UV Stable Polyethylene Hull for durability and low maintenance.
- Planing hull design and bolt-on ballast keel give exceptional stability and assist floatation height for excellent visibility. Stability 'tuning' is achieved via multiple mooring eye points to suit the water conditions and moorings used.
- Each PB750FW hull is fully foam-filled and therefore virtually unsinkable even if the outer skin is punctured.
- Light overall weight enables launch or recovery by hand from a small craft. This is even possible without lifting gear.

The PB750FW is the ideal compromise between survivability and affordability

Starboard Hand PB750FW, fitted with PL82 Self-contained Solar LED Lantern

- Buoy has a reinforced lifting eye, plus a boathook handle for easier capture.
- Buoy can be coloured red, green, yellow, or white in accordance with IALA recommendations.
- Detachable Can or Cone Daymarks, which can carry an optional internal radar reflector, and have threaded inserts to directly accept a PL82 or PL72 marine lantern. IALA Special Mark top mark version is also available.

The PB750FW is a cost-effective solution where many buoys are required to mark a long river, or estuary.
